GIS Day Savannah 2007

GIS Day

Savannah 2007 is an inaugural program to introduce GIS education to local school-children and promote the capabilities & local usage of GIS to the general business community.

Savannah's GIS Day celebration is part of a larger International GIS Day that falls in the middle of National Geographic's International Geography Week. SAGIS and the sponsors of our event are proud to invite local area public & private junior high school (8th grade) students to the morning program, with area business owners, staff, GIS users and interested general public invited in the afternoon. We hope to have a very busy and informative day!

This year marks GIS Day's ninth anniversary nationally, and Savannah's first, so please join with us in the celebration and become part of this annual tradition at the Savannah Civic Center November 14, 2007 1:00 - 3:30 open to general public.

GIS is for Everyone

Although people usually don't think about it much, there's a geographic component to just about everything human beings do – that is, almost every activity, thing, trend, issue, or phenomenon takes place at a particular location on the earth. This truth is at the core of a powerful digital technology – geographic information systems, or GIS.

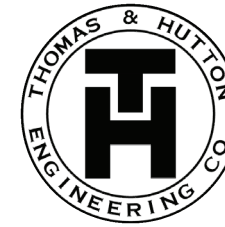

Using a GIS, virtually any kind of data can be placed on a digital map, then visualized, compared, measured, and analyzed. Many governments and large organizations use GIS because of the astonishing diversity of information types that can be mapped and analyzed – these range from population demographics, to health statistics and epidemiology, utility and transportation networks, flood protection zones, animal migration routes, crime patterns, historical battlefields, sales and marketing trends, disaster destruction areas, and much more.

Discover how GIS is used in our community and region at

GIS DAY SAVANNAH 2007

SAGIS is working to establish a GIS program within the Savannah Chatham County Public School System. All proceeds from GIS Day will go to help fund the program.
